Product Name :
Pneumatic Brake Riveting Machine

Product Code :
MACHEQ-A-M13301003

Technical Specification :

Automotive brake shoe riveting machine is suitable for all kinds of truck brake shoe copper and aluminum material rivet, with strong riveting force, easy operation, high working efficiency.

Precautions in pneumatic brake riveting machine operation:

The plant air supply shall be cut off when the equipment is under repair or replacing the punch head. It is strictly prohibited to place one's hand underneath the punch head during operation for fear of accident.

During operation, if the riveting force is not sufficient, check if the air pressure is normal. The air pressure will drop when the punch head works in fast speed. Wait a few seconds for the pressure to rise to normal to guarantee the joining quality.

If joining action fails or no action during the operation, check if the air valve is damaged, if the air hose is choked and check if the rocking rod or other transmission parts are jammed. Lubricate the traveler, slide sleeve and other moving parts regularly.

Working Air Pressure: 0-0.8MPa

Riveting Force : 60KN

Traveler: 40mm
